

The standing stone of Trépaloup

Aigoual - Val-d'Aigoual

La vallée de l'Hérault (© Nathalie Thomas)

This is a short walk with exceptional views. On a clear day, you can see almost a quarter of mainland France.

This walk offers panoramic views from the summit, at 1,567 m the highest point of the Gard department. They stretch from the Alps to the Pyrenees, from the Puy de Sancy to the Mediterranean. You overlook the Hérault valley and its legendary 4,000 Steps trail.

Useful information

Practice : Hiking on foot

Duration : 1 h

Length : 2.3 km

Trek ascent : 87 m

Difficulty : Easy

Type : Loop

Themes : Fauna and flora, History and culture

Trek

Departure : Summit of Mont Aigoual

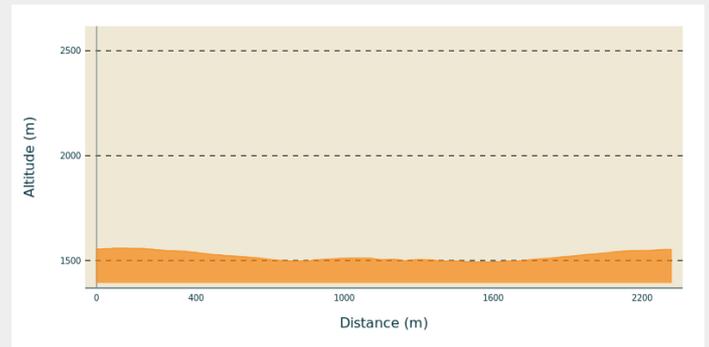

Arrival : Summit of Mont Aigoual

Markings :  Yellow waymarks

Cities : 1. Val-d'Aigoual

2. Bassurels

Altimetric profile

Min elevation 1493 m Max elevation 1559 m

Signposts will guide you all along this route. In the description below, the signposted place names and/or directions are given in ***bold italics*** between quotation marks:

Starting from "***Mont Aigoual - Parking***", make for "***Menhir de Trépaloup***", then "***Source du Tarnon***", "***Combe Rude***". Walk around the summit to return to "***Menhir de Trépaloup***". Climb towards "***Mont Aigoual***" (0.6 km). Walk past the front of the meteorological museum to reach the car park.

This walk is taken from the guidebook **Massif de l'Aigoual**, published by the communauté de communes Causses Aigoual Cévennes as part of the collection Espaces naturels gardois and the label Gard Pleine Nature.

All useful information

Is in the midst of the park

The national park is an unrestricted natural area but subjected to regulations which must be known by all visitors.

Advices

No mountain-biking. Make sure your equipment is appropriate for the day's weather conditions. Remember that the weather changes quickly in the mountains. Take enough water, wear sturdy shoes and put on a hat. Please close all gates and barriers behind you.

How to come ?

Transports

liO is the regional public transport service of the Occitanie/ Pyrénées – Méditerranée region. It facilitates everyone's movements by prioritising public transport. For more information, call 08 10 33 42 73 or go to www.laregion.fr

Access

From L'Espérou on the D986, D269, D18 and RD 118. From the Col de Perjuret on the D18 and D 118.

Advised parking

Summit of Mont Aigoual.

Pôle Nature Aigoual

On your path...

🏠 The meteorological observatory (A)

Inaugurated in 1824, the meteorological observatory was built on the initiative of Georges Fabre, one of the pioneers of the reforestation of Mont Aigoual. His work with the botanist Charles Flahault enabled the creation of the arboretum of L'Hort de Dieu. The first meteorological data were gathered by agents from the French National Water and Forestry Commission. Since 1943, the observatory has been managed by the National Meteorological Office. It is France's last mountain weather station that is inhabited year-round.

🌿 Short-grass prairies and heath on the summit of Mont Aigoual (B)

Here, only species with a short reproductive cycle can settle due to the frequently glacial climate. The heath has been invaded by heather and mountain pine. This zone is barely wooded due to the violent winds and is comparable to subalpine vegetation, consisting of short-grass prairies and heather and blueberry moor. It is sometimes called pseudo-alpine.

🌿 The evolution of plant life (C)

At the pass stands a schist menhir (standing stone). To the north, in Trépaloup ravine, hewn flint implements bear witness to a human presence in the region since prehistoric times. Palynological analyses (studies of pollen fossilised in peatbogs) have allowed scientists to piece together the plant life on Mont Aigoual from 8,000 to 5,000 BC. Pine predominated, accompanied by birch and hazelnut. Then pine populations gradually diminished. The damp climate warmed up, favouring the spread of oak and hazelnut. Finally, the increased damp and cloud cover at altitude allowed fir and beech to develop. From the end of the first century BC, the substantial percentage of grasses shows that forest had receded in favour of pasture and prairies. This was the start of the great deforestation.

🌲 Mont Aigoual weather station (D)

Inaugurated in 1894, this infrastructure is France's last mountain weather station to be inhabited. Its history is closely linked to the reforestation of Mont Aigoual. It has become a high-performance weather station with an array of modern test instruments, measuring devices for extreme conditions, and a museum/exhibition on meteorology. The 800 sq m exhibition will tell you more about climatology on Mont Aigoual and about meteorology in general.
