

Rocher du Trenze and Bayardet, Trail #20

Mont Lozère - Pont de Montvert - Sud Mont Lozère

Vue du Trenze (© Parc National des Cévennes)

A rather athletic trail that won't disappoint. Steep paths, the Rocher de Trenze, the Jasse d'Olibou and more: a summary of marvels !

Une boucle assez sportive mais qui ne déçoit pas. Sentiers escarpés, rochers de Trenze, Jasse d'Olibou... Un condensé de merveilles !

Useful information

Practice : Foot race

Duration : 2 h 15

Length : 17.9 km

Trek ascent : 862 m

Difficulty : Medium

Type : Loop

Trek

Departure : Mas de la Barque

Arrival : Mas de la Barque

Markings :  Trail PPN Mt Lozère

Cities : 1. Pont de Montvert - Sud Mont Lozère
2. Vialas

Altimetric profile

Min elevation 852 m Max elevation 1426 m

You start with a downhill section of about 4km on narrow and sometimes rocky paths – some peatbogs too, but nothing too technical. You will go through several cattle barriers, remember to close them properly.

A short but steep section leads you to splendid panoramic views over the Cévennes and announces a grand descent along Le Trenze cliffs.

At the Rocher du Trenze, the descent becomes steeper and more technical, until you reach the Col de Montclar pass.

Then a short portion on a track before you take a cheerful singletrack that is rather steep.

At Les Bouzèdes, the hardest part of the ascent is over. Just one more uphill kilometre on a path before reaching the track.

The circuit ends with 2 km of level ground on a pretty forest track.

A short version, waymarked 20v, lets you shorten the circuit to 10 km.

Follow the waymarks for trail #20.

Signposts will guide you all along this route, as well as yellow painted waymarks. In the description below, the signposted place names and/or directions are given in ***bold italics*** between quotation marks:

Starting at "***Mas de La Barque***", head for "***Col de Montclar***" via "***Les écuries de Mas de La Barque***", "***Rochers de la barque***" (2x), "***Les faux des Armes***", "***La Chassalde***", "***La jasse d'Olibou***", "***Sous le Col de Montclars***".

At "***Col de Montclars***", go to "***Soubre Montclars***".

Then return to "***Mas de La Barque***" via "***Soubre Redounde***", "***Les Bouzèdes***", "***Bouos d'homme***", "***La roche fendue***", "***Sous la roche fendue***", "***Gadione***" (2x), "***Rochers de la Barque***" (2x) and "***Les écuries du Mas de La Barque***".

This trail is taken from the guidebook **Mont Lozère - Pays des sources**, published by the Pôle de pleine nature du mont Lozère.

On your path...

Le Mas de La Barque (A)
Sphagnum moss (C)
The formation of Mont Lozère (E)

 The mysterious boat (B)
Slash-and-burn (D)

All useful information

Is in the midst of the park

The national park is an unrestricted natural area but subjected to regulations which must be known by all visitors.

Advices

Before committing yourself to a circuit, ensure that it is suitable for your activity level and ability. Remember that the weather changes quickly in the mountains. Please close all gates and barriers behind you. Stay on the marked path.

How to come ?

Access

From Villefort, on the D 66.

From Génolhac, on the D 362 then the D 66.

Advised parking

On your path...

Le Mas de La Barque (A)

Le Mas de La Barque was only a forester's house at the end of the 20th century. From the 1960s onwards, it was frequented by children's ski clubs and then by families from the Gard on the weekend. During the week, the association "Union pour l'Animation de la Grange" organised field trips, heritage classes and theme days open to all. A costly infrastructure was gradually built (buildings, ski lifts, snow canons), then partly demolished again. Today, as part of an overall programme of reclassifying the site, it has been developed for tourism (cross-country skiing, snowshoeing, dog-sledding, etc.) and is run by a semi-public company. The resort offers outdoor activities in summer as well as in winter.

The mysterious boat (B)

Have you noticed the strange rock shaped like a boat (barque)? Is that what gave the hamlet its name? Alternatively, in the local patois, a berque is a gap in the mountain. So: Mas de la Barque or Mas de la Berque?

Mas de la Barque is part of the municipality of Vialas and borders the forest of Gourdouze. The estate of the Priory of Gourdouze, to which the forest once belonged, was declared government property during the French Revolution in 1789, before being sold to pay the state's debts.

Sphagnum moss (C)

You will be crossing wetlands where sphagnum moss lives, whose colour ranges from yellowish green to blood-red. Without them, the role of peatbogs would be seriously compromised. Once dead, they constitute the mainstay of peat and limit the establishment of competitors. They function like sponges, retaining a great deal of water and asphyxiating the roots of other plants. Their presence is a sign that the peatland is in good health; it facilitates the growth of species of great heritage interest, such as the sundew, cranberry, bog-rosemary, etc. Unfortunately, these are fragile and sensitive to crushing, so please stay on the path and get off your bike.

Slash-and-burn (D)

This technique consists of clearing weeds and shrubs using fire: the fire is utilised to get rid of broom, especially in places that a motorised shredder cannot access. Slash-and burn is carried out every 4 to 5 years in a zone chosen by the farmer. Over larger areas, it is supervised by the fire brigade. In the 19th century, 100,000 sheep migrated to summer pastures here (transhumance) and joined the plateau herds, leaving no room for broom. As soon as the meadows are no longer grazed, they are colonised by broom, then shrubs, then forest. These open spaces are due to human activity (clearing) to allow herds to graze on grass. Grazing prevents the spontaneous growth of shrubs and any generalised invasion of forest.

The formation of Mont Lozère (E)

This ancient massif consists of granite which, as magma, was pushed up from the depths of the Earth to its crust, through the schist. Slow cooling caused fractures, called joints, which allow water to infiltrate deep into the rock and alter it. This crystalline rock, which is composed of mica, quartz and feldspath, erodes slowly under the action of rain and frost, creating the rounded shapes that are characteristic of Mont Lozère.
